Technology & Interim Management

PROJECT

Implementation of a dedicated (private) globally distributed and

Major financial services company in Hesse.

MAIN FOCUS

Cloud

INDUSTRY

Financial Services

TIME FRAME

8 month

DIRECT TEAM

18

STARTING POINT

The company, active in more than 50 countries, was keen to enable every employee globally to work immediately in their task-specific environment at any workstation in the company. They had decided to set up a distributed private cloud service for this purpose.

ROLE & TASKS

Project Manager on behalf of the responsible CIO:

- Design of the target architecture with the consumption and operating processes based upon it.
- Implementation of the solution across the global service- and data-centres (DE, UK, India, Japan, Hong Kong, New York, Sydney)
- Integration of the processes into the sourced helpdesk
- Implementation of a globally standardised order and invoicing model
- Escalation management for the project and new processes
- Creation of the required documentation (architecture, operation)

RESULTS

- Launch of the service according to the agreed plan
- Establishment of a global uniform consumption model
- Implementation of financial risk management (currency) across all supplying and consuming units
- Extension of the solution concept also to the client's trading area
